

Top Menu:

Pictured above is the File dropdown menu. It contains 5 options:

“New Note” for creating a new file,

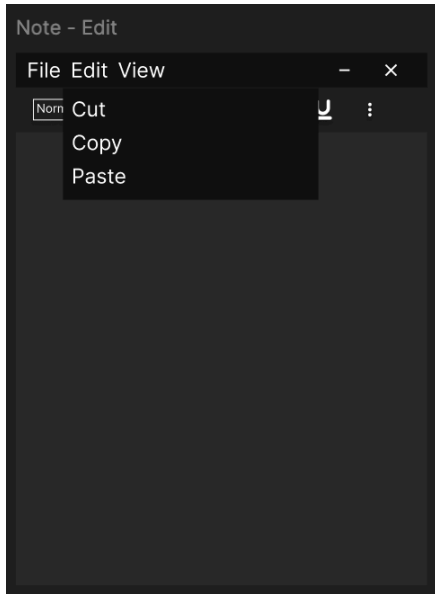

“New Note Set” for creating a new directory,

“Open Note Set” for opening a new directory,

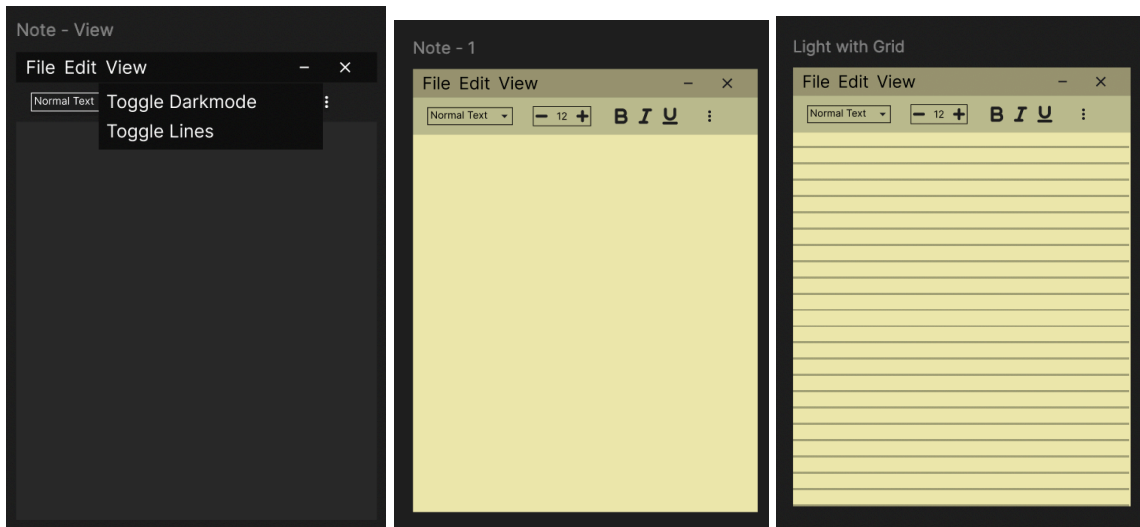

“Open Recent Note Set” for opening a directory appearing in order of most recently accessed, and “Delete Note” for deleting a file.

Note sets will be explained further in the [Note Sets](#) section.

This menu is accessed by clicking on the File button in the top menu and is exited by mousing out of the dropdown menu.

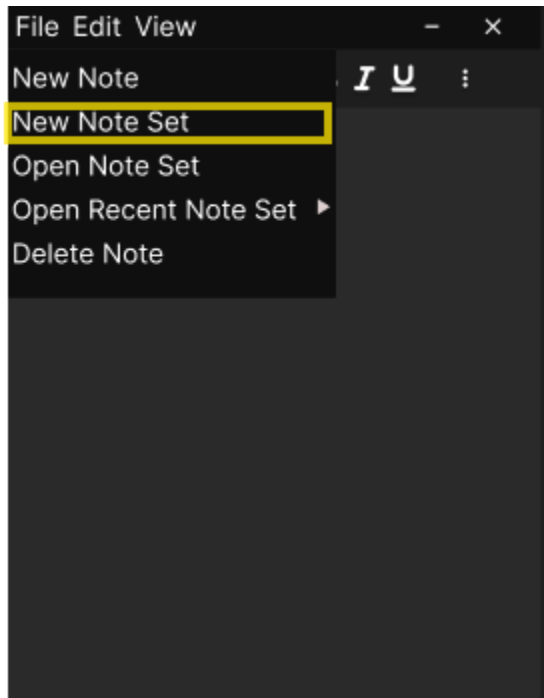

Pictured above is the “Edit” dropdown menu. It contains 3 options:
Cut for cutting text and putting it into the clipboard,
Copy for copying text to the clipboard,
and Paste for pasting from the clipboard into the file.
This menu is accessed by clicking on Edit in the top menu and
Is exited by mousing off of the Edit dropdown menu.

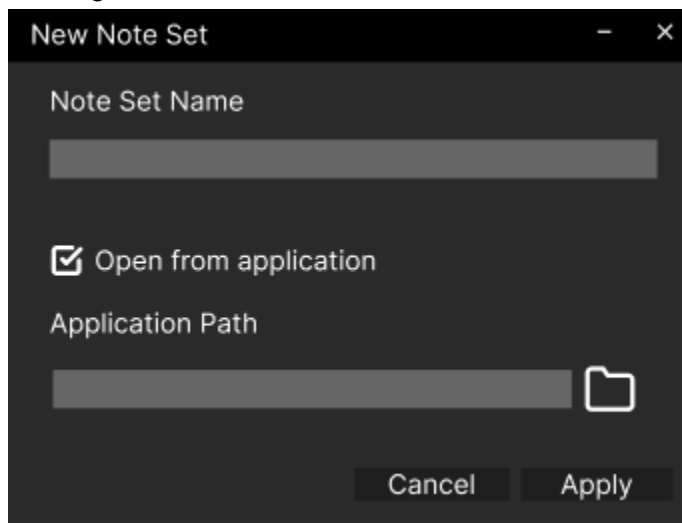

Pictured above is the View dropdown menu. It contains two options:
“Toggle Darkmode” for swapping between the default dark coloration and a brighter color scheme and
“Toggle Lines” for toggling lines similar to those on a notepad.
This dropdown is accessed by clicking on the View button in the top menu and is exited by mousing out of the dropdown.

Note Sets:

From the file dropdown, the New Note Set option allows for a user to create a noteset that groups together notes based on the application they are associated to.

Clicking the “New Note Set” button leads to the following window:

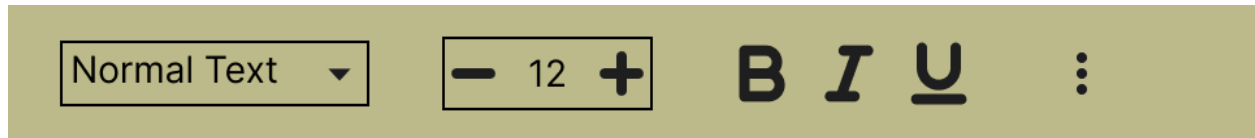

In the above window, the two fields and a toggle option that are required to be filled are:

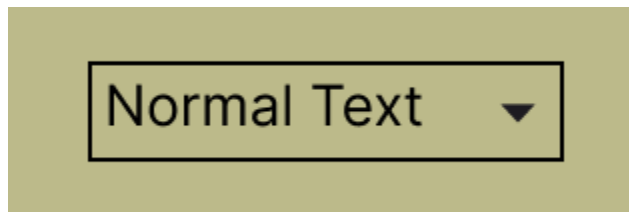

- “Note Set Name” field: this allows the user to name the note set whatever they like, allowing them to easily reopen the set manually if they would like.
- “Open from application” toggle option: determines if the note set will automatically open when the specified application is opened.

- “Application Path” field: allows the user to specify what application the note set is linked to and will allow the note set to open when the specified application is detected running.

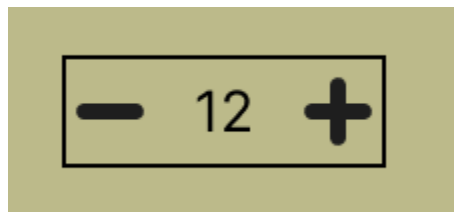

Text Editing / Formatting:

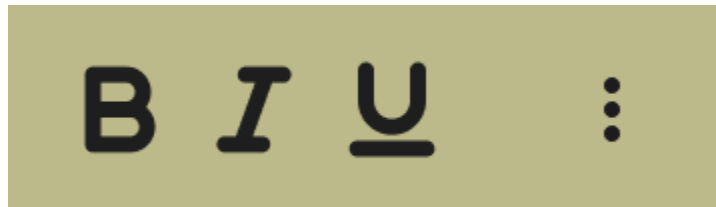

Text Formatting is rather simple, there is

Font Selection

Font size

And additional stylization options such as

- Bold
- Italics
- And underlining text

As well as the potential for a dropdown should any other options be necessary

The majority of the application works in this blank space, the text editor, it's where the user can type in anything and it will show up right here
